

SATURN Data Explorer:

A powerful and expandable tool for exploration of
Columbia River data

*Charles Seaton, António M. Baptista and
Alex Jaramillo*

NSF Science and Technology Center for Coastal Margin
Observation & Prediction (CMOP)
Oregon Health & Science University

- Online tool for plotting data relevant to the Columbia River estuary (primarily CMOP data, but also NOAA-COOPS, USGS, NDBC, and US-ACE data)
- Variety of plotting options, from simple timeseries plots to 3 variable scatter plots to tide phase plots.
- Plotted data can be downloaded in text or matlab format
- Any real-time dataset included in the regional ocean observation system (NANOOS) can be plotted in the data explorer
- Historical datasets can be incorporated by special arrangement

- Salinity, temperature and pressure data from multiple fixed stations in the lower CR estuary, from 1997 (temperature) or 2001 (salinity) through today
- Biogeochemical data from SATURN fixed stations and gliders from 2009 to the present
- External data from USGS, NOAA-COOPS and NDBC (river discharge, elevation, offshore buoy data)
- Recent data (30 days) from all stations in the [NANOOS data repository](#)

Salinity intrusion appears to transition between two modes tied to river discharge

At discharges below $5500 \text{ m}^3/\text{s}$, water greater than 10 psu reaches Elliott Point and into Cathlamet Bay

At discharges above $7500 \text{ m}^3/\text{s}$ no salt reaches Elliott Point and little salt reaches into Cathlamet Bay

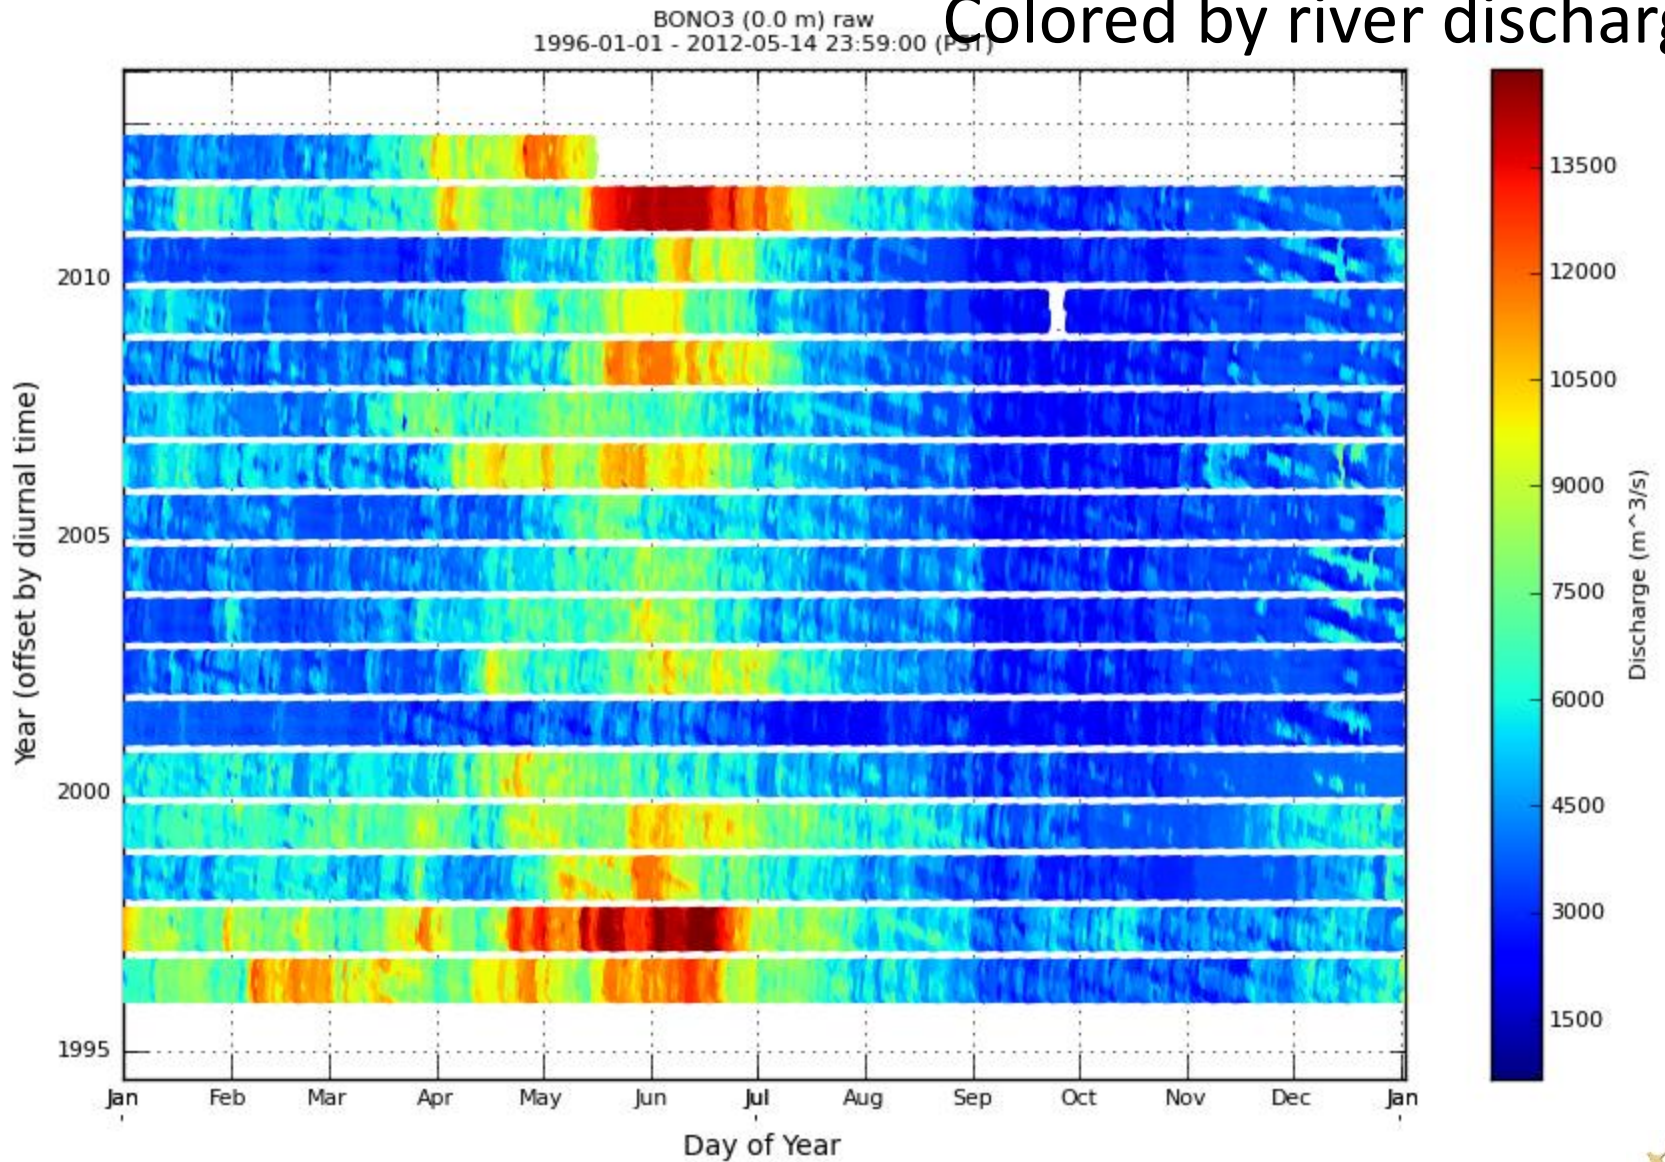

Lower estuary stations also show signs of this transition

- Elliott Point (eliot) is near the upper limit of salinity intrusion in the main channel
- Cathlamet Bay North Channel Light 3 (cbnc3) is near the downriver end of Cathlamet Bay
- Astoria Megler Bridge - South Channel (am169) is located at a point that reliably sees salinity, but that has a maximum salinity that is highly variable
- SATURN-03 is a recent multi-depth station in the lower estuary

http://www.stccmop.org/datamart/observation_network/dataexplorer ([offline demo](#))

- Basic features:
 - make plots, download data
- Advanced features:
 - require CMOP login, available on request to webmaster@stccmop.org
 - save and share plots online, comment on plots (your own or other's)

- We use the Data Explorer to show that salinity intrusion in the lower CR estuary undergoes a transition at river discharges near 6000-8000 m³/s.
- The CMOP Data Explorer is a powerful online visualization tool for CR estuary data.
- It is useful for monitoring real-time data and for visual exploration of historical data
- Non-CMOP data can be incorporated into the Data Explorer either via NANOOS or through arrangement with CMOP

SATURN Observation Network: Endurance Stations

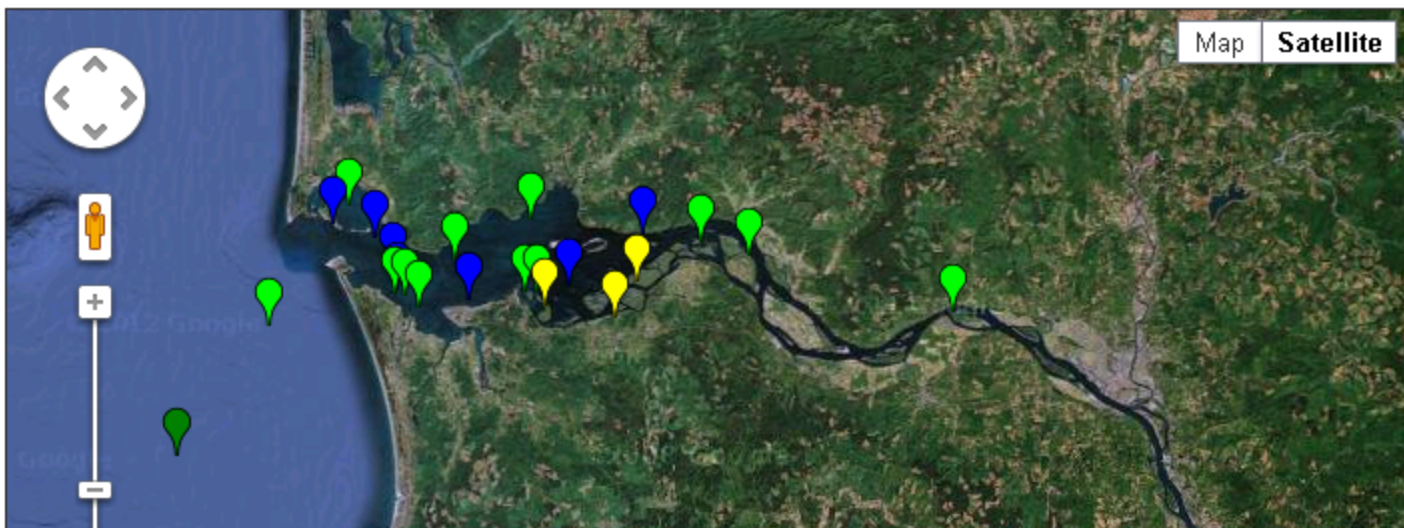

This is an interactive map with links to physical and biogeochemical data from endurance stations in the Columbia River estuary. Stations are part of CMOP's end-to-end collaborative, SATURN, and contribute to NANOOS, a regional association of the U.S. Integrated Ocean Observing System.

A graph displaying metrics of cumulative physical and biogeochemical observations through 2011 can be found [here](#).

The screenshot displays the Data Explorer application interface. At the top, there is a toolbar with various icons including a line graph, save, download, and help. Below the toolbar, a window titled "Current session:" contains a plot of "SATURN03 raw" data. The plot shows salinity (psu) on the y-axis (ranging from 0 to 30) against time on the x-axis (ranging from 04/30 to 05/02). A dialog box is overlaid on the plot, titled "SATURN03 raw". The dialog box contains a notice: "NOTICE: data from different instruments is subjected to interpolation (Click for more)". Below the notice, there is a section for "Data format:" with two radio button options: "Comma delimited" (selected) and "MATLAB data". At the bottom of the dialog box, there are three buttons: "Download", "Cancel", and "URL". The "Cancel" button is highlighted with a red box. To the right of the plot, a context menu is visible with options: "EDIT", "LEGEND", "CLONE", "URL", "DATA", and "SELECT". The "DATA" option is highlighted with a red box. The wrench icon in the plot's toolbar is also highlighted with a red box.

To download data, first make a timeseries plot, then select the wrench icon and select "DATA"
